

EIR Biostimulant

Botanical formulation for plant vitality and crop health.

Formula complete | Field-tested | Registration and marketing next

How it works

A water-based botanical formulation combines plant-health chemistry with stable dispersion for agricultural application.

Evidence and its interpretation

In a 29-day pepper greenhouse study, mean disease severity at 0.1% fell from 2.89 to 0.08. The final untreated-control score was 5.00.

Bangkok region; 250 m² in five zones. Disease severity was scored from 0 to 5. These are plant-health observations, not direct measurements of yield or nutrient-use efficiency.

Completed work and next milestone

Completed: Formulation complete; laboratory and crop trials; stability and emulsification testing.

Next: Registration and marketing. The existing entry plan begins in Thailand, followed by ASEAN markets.

Commercial application

Intended customers: Growers and crop-input distributors. A liquid application format and crop data provide a starting point for distributor-led positioning and market-specific claims.

Technical records are available for confidential review. Product registration, permitted claims and commercial terms are defined for the selected market.
